

Careers — /careers

Route: /careers **Primary keyword:** Daemon careers, frontier intelligence jobs. **Tone:** institutional, selective. Daemon does not "hire fast" and does not advertise growth metrics.

Section 1 — Hero

Heading: Work at Daemon.

Sub-line: Frontier intelligence infrastructure. Long horizons. Deliberate hiring.

Body (one paragraph): Daemon hires people who can hold a problem over years. Engineering, research, infrastructure, and operations roles open as the architecture requires them. We do not hire to fill a headcount target. We do not run a perpetual recruiting funnel.

Section 2 — Hiring philosophy

Heading: How Daemon hires.

Body (four short principles, each heading + one paragraph):

Architecture over enthusiasm

Daemon hires people whose work demonstrates architectural thinking — systems, abstractions, long-horizon program design. Enthusiasm for "AI" is not a qualification. Demonstrated capacity to build durable infrastructure is.

Depth over breadth

We hire for depth in one or two domains, not surface familiarity with many. A research scientist with five years on memory architectures matters more than a generalist with a survey-level view of the field.

Operating in restraint

Daemion's surfaces are quiet. The hiring process is the same. We do not run promotional campaigns at conferences. We do not gamify recruiting. The interview process is rigorous, structured, and respectful of the candidate's time.

Hiring once, retaining long

Daemion is built for multi-year retention. Compensation, equity, work environment, and research autonomy are calibrated to that horizon. Annual attrition is treated as an architectural defect.

Section 3 — Domains where Daemion hires

Heading: Domains.

Body intro (one line): Open and standing-interest domains are listed below. Specific role postings follow under each.

Domain list (vertical, one entry per domain):

Research

Core, Orpheus, Mnemosyne, Atar, and Thaleon hire research scientists, research engineers, and research associates. Doctoral degree expected for most senior research roles; equivalent demonstrated work accepted.

Active focus areas: - Reasoning architectures - Long-horizon planning under uncertainty - Persistent memory and continual learning - Alignment of autonomous systems - Multi-agent coordination - Emergent cognition (Orpheus, restricted access)

Engineering

Vector and Merqis hire systems engineers, infrastructure engineers, and applied research engineers. Strong systems background expected. Production experience operating at scale required for senior roles.

Active focus areas: - Multi-agent orchestration platforms - Long-running autonomous system infrastructure - Inference platform engineering - Operational integration of cognition systems

Hardware

Forge hires silicon engineers, hardware architects, and supply-chain operators. Multi-year design cycle experience required.

Active focus areas: - Inference silicon architecture - Edge and embedded compute platforms - Robotics-grade compute systems

Strategy and operations

Company office hires program directors, partnerships operators, and strategic-engagement leads. Background in institutional or sovereign engagement preferred.

Design

Design hires across product surfaces (Eidolon, Kheiron, Merqis) for designers comfortable with restrained, institutional visual systems. Portfolio expectation: long-cycle product work, not consumer-app polish.

Section 4 — Open positions

Heading: Open positions.

Body intro (one line): Roles listed below are currently open. Standing-interest roles accept applications continuously.

Role list structure (each entry one line: domain · title · location · status — links to a dedicated job-posting page):

Research	· Research Scientist, Long-Horizon Planning	· Dhaka	· Open
Research	· Research Engineer, Memory Architectures	· Dhaka	· Open
Engineering	· Senior Systems Engineer, Vector	· Dhaka	· Open
Engineering	· Infrastructure Engineer, Merqis	· Dhaka	· Open
Hardware	· Silicon Architect, Forge	· Dhaka	· Open
Operations	· Partnerships Lead, Company Office	· Dhaka	· Open
Design	· Product Designer, Eidolon	· Dhaka	· Open

Role list above is placeholder. Replace with actual open roles before publish. Each role links to a /careers/<role-slug> page with JobPosting schema.

Section 5 — Standing interest

Heading: Standing interest.

Body (one paragraph): Daemion accepts applications outside the open-role list. If your work matches an architectural domain Daemion operates in, and no posting fits, apply to standing interest. We read every submission.

Application line: `careers@daemion.com` — subject line `Standing interest · [domain]` .

Section 6 — Process

Heading: Hiring process.

Body intro (one line): The process is consistent across roles, calibrated to depth.

Process steps (numbered, one line each):

1. Application review by the relevant domain lead.
2. First conversation — 45 minutes, structured. Domain depth, motivation, and fit.
3. Technical or research assessment — calibrated to the role. Most assessments are take-home, multi-day, and modeled on actual Daemion work. Compensation is provided for take-home work.
4. Panel — 2-4 conversations across the team you would join, plus one cross-division conversation.
5. Founder conversation — final-round only, for all senior roles and many earlier-career roles.
6. Decision and offer within 5 business days of the founder conversation.

Total cycle: typically 3-5 weeks from application to decision.

Section 7 — Compensation and environment

Heading: Compensation.

Body (two paragraphs):

Compensation is competitive against frontier research and infrastructure laboratories — calibrated globally, paid in local currency or USD per role and location. Equity is meaningful and structured for long-term retention.

Work environment is Dhaka-first, in-office preferred. Limited remote capacity exists for senior research roles where the work justifies it. Daemion does not run a fully-remote organization; the cognitive coherence of long-cycle programs requires sustained in-person collaboration.

Section 8 — Engagement

Heading: Apply.

Body: Applications and standing interest both flow through `careers@daemion.com` . For role-specific applications, use the link on the posting itself.

For inquiries about the hiring process or compensation philosophy: `careers@daemion.com` .

Copy review checklist

- ☐ Open-position list replaced with real roles before publish
- ☐ Each open role has a `/careers/<slug>` page with `JobPosting` schema
- ☐ `careers@daemion.com` mailbox monitored and routed to the founding team
- ☐ No forbidden words (`brand/voice.md`)
- ☐ No startup-cliché role descriptors — institutional voice strictly enforced. See full forbidden list in `brand/voice.md`
- ☐ Compensation language confirmed by founders before publish (currently general)
- ☐ Remote-work language confirmed; "Dhaka-first, in-office preferred" needs founder sign-off
- ☐ Hiring process steps confirmed accurate to actual founder-run process
