

Products — /products

Route: /products **Primary keyword:** autonomous intelligence systems, cognition products.
Anchors: #eidolon , #kheiron , #merqis , #aevum .

Section 1 — Hero

Heading: Four products.

Sub-line: Cognition for individuals, executives, enterprises, and civilizations.

Body (one paragraph): Daemon's product hierarchy spans four operating tiers. Each product is a deployed application of cognition infrastructure built on Daemon's shared research and execution substrate.

Anchor nav (single horizontal row): Eidolon · Kheiron · Merqis · Aevum

Section 2 — Eidolon

Eyebrow: Tier — Consumer.

Heading: Eidolon.

Positioning line: A persistent cognitive counterpart.

Body (two paragraphs): Eidolon is Daemon's consumer cognition surface — a persistent counterpart that reasons alongside its operator across years, contexts, and decisions. Not a productivity assistant. Not a generalized chatbot. A counterpart.

Eidolon holds long memory, models its operator's intent over extended horizons, and operates with autonomy bounded by explicit alignment. The operator retains directive authority; Eidolon retains continuity.

Capabilities (single list, declarative — no bullet metaphors): - Persistent memory across years of operation - Long-horizon goal tracking and intent modeling - Reasoning under partial information - Autonomy bounded by explicit alignment protocols - Cross-device continuity through Daemon's substrate

Availability: Closed invitation. Direct application to the Eidolon research program through eidolon@daemion.com .

Section 3 — Kheiron

Eyebrow: Tier — Executive.

Heading: Kheiron.

Positioning line: Strategic intelligence for sovereign and executive systems.

Body (two paragraphs): Kheiron is Daemion's executive-tier intelligence — built for the operators whose decisions shape institutional, governmental, and economic outcomes. Heads of state, sovereign system operators, and chief executives engaged in long-horizon strategic decisions.

Kheiron's surface is scenario reasoning, strategic simulation, and long-horizon planning under uncertainty. It does not advise. It models. The operator decides.

Capabilities: - Scenario reasoning across multiple time horizons - Strategic simulation of complex institutional systems - Long-horizon planning under sustained uncertainty - Geopolitical and economic modeling at sovereign scale - Deployed under direct engagement only

Availability: Direct engagement only. No self-serve access. Inquiries via kheiron@daemion.com .

Section 4 — Merqis

Eyebrow: Tier — Enterprise.

Heading: Merqis.

Positioning line: Operational intelligence at scale.

Body (two paragraphs): Merqis is Daemion's enterprise intelligence operating system. It coordinates autonomous operations across the breadth of an institution — from customer interaction to internal coordination, from inventory to compliance, from inbound communication to outbound execution.

Merqis is not a workflow tool. It is the cognition layer that makes autonomous operations possible at the scale at which institutions actually operate.

Capabilities: - Enterprise-wide operational coordination - Autonomous operations across departments and functions - Multi-channel cognition (customer-facing, internal, partner-facing) - Long-cycle memory of institutional state - Integration with existing enterprise infrastructure under Forge-hardened compute

Availability: Direct engagement with Daemion's enterprise office. Inquiries via merqis@daemion.com.

Section 5 — Aevum

Eyebrow: Tier — Civilizational.

Heading: Aevum.

Positioning line: Deep-time intelligence.

Body (two paragraphs): Aevum is Daemion's civilizational-tier modeling system. Long-horizon simulation of climate, economic systems, demographic dynamics, and the planetary infrastructure that supports them. Aevum is not built for quarterly cycles. It is built for the decades that institutional planning actually requires.

Aevum is operated under the Atlas division, with direct engagement by sovereign institutions, multilateral organizations, and selected research consortiums.

Capabilities: - Climate and earth-systems modeling - Long-cycle economic forecasting - Demographic and migration simulation - Planetary infrastructure intelligence - Multi-decadal scenario reasoning

Availability: Sovereign and multilateral engagement only. Inquiries via aevum@daemion.com.

Section 6 — Product hierarchy summary

Heading: The hierarchy.

Body intro (one line): Four products. Four operating tiers. One substrate.

Hierarchy table (vertical, four rows — Tier • Product • Operator • Engagement):

TIER	PRODUCT	OPERATOR	ENGAGEMENT
Consumer	Eidolon	Individual	Closed invitation
Executive	Kheiron	Sovereign / CEO / strategic operator	Direct engagement
Enterprise	Merqis	Institution	Direct engagement
Civilizational	Aevum	Sovereign / multilateral / research consortium	Sovereign engagement

Section 7 — Substrate

Heading: Shared substrate.

Body (one paragraph): All four products operate on Daemion's shared cognition substrate, drawing from Core's research foundation, Vector's execution layer, Atlas's modeling intelligence, and Forge's compute infrastructure. Helix research informs the consumer and executive tiers under tight constraint. Veil hardens deployments where classification is required.

Section 8 — Engagement

Heading: Engage with a product.

Body: Daemion does not run a free trial. Every product is engaged directly through the relevant office.

Contact lines (one per product): - Eidolon — `eidolon@daemion.com` - Kheiron — `kheiron@daemion.com` - Merqis — `merqis@daemion.com` - Aevum — `aevum@daemion.com`

Or route through the general office: `Contact` → → `/contact`

Copy review checklist

- [] All four products match brand report §4 (Eidolon, Kheiron, Merqis, Aevum) — positioning verbatim where stated
- [] No forbidden words (`brand/voice.md`)
- [] No pricing on any product surface
- [] No "free trial," "sign up," "try now" — engagement is direct only

- [] All four product-specific mailboxes exist and are monitored before publish
- [] Anchor links work (#eidolon , #kheiron , #merqis , #aevum)
- [] Product schema rendered for each (one schema block per product)
- [] Hierarchy table accessible (proper <th> markup, not styled <td> headers)
